2015 Projects

- Wireless scanner
  - Basic rollout
  - Printer workflow modules
  - Weeding workflow modules
  - Vinyl workflow modules
  - Receiving workflow modules
  - Inventory Workflow modules
- Producer
  - Activity tracking
    - Review to get it tracking accurately
    - Integration with reports
  - Roles refinement
  - Tiers within roles
    - Inline support for tier functionality
  - Inline training & wiki
  - Inline issue reporting
    - Screen shot attachment – photo attachment
  - Throughput reporting
  - HUD for receiving & vinyl workflows
  - Inventory integration
- Surveillance Cameras
- Colored Vinyl
  - Improve scanning of barcodes
  - Tech support for moving to work cells
  - Add tracking for each process
    - Barcode scanner
    - Friction free webcam at weed stations
    - Friction free Vinyl Manager
  - Vinyl Manager tool (allow workers to focus on cutters, not computers)
  - Revise or disbandment of replacement cell.
  - Throughput & Productivity tracking and reporting
  - Introduce a QA process
  - Introduce an SLA
- Printed Vinyl
  - Complete selection of new media & transfer
  - Support of new equipment and media rollout
  - Print Manager tool (allow workers to focus on printers, not computers)
  - Integrate Mimaki into Print Manager
  - Tune Summa Flatbed Manager tool (allow workers to focus on flatbed, not computers)
  - Throughput tracking and reporting
  - Introduce an SLA
- Revise issue resolution workflow – needs a formal approval step?

- Receiving
  - Transition to new Work Manager
  - Lost & Found integration
  - Track cage setup, artwork and other steps
  - Empower receiving lead to make decisions on batch rollouts
  - Box receiving process
- Inventory? – tighter integration
  - Standardize Supplier Integration
  - Upgrade standard Pick sheet for inventory support
  - Introduce decrementing inventory across supplier integration
  - Refactor to reuse existing code base where applicable
  - Review and straighten out incorrect relationships
  - Add support for same day fulfillment
  - Add support for issue tracking
- Design Generation
  - Complete the work to optimize generators order of execution
  - Create and setup EMB only generators
  - revise disabled designs tool to work for production floor only workflows
- Production Planning
  - Redirect Classic orders properly
  - Map colored Vinyl like we do embroidery threads
  - Refactor design sizes to printable area size
- Product & Suppliers
  - Fix "import from catalog"
  - Revise product onboarding workflow
  - Add Product change history
  - Add Supplier Inventory history tracking
  - Add refund support to supplier integration
  - Continue to improve supplier integration for each supplier
- Accounting
  - Revise issue resolution tool into 3-way matching tool
  - Import 3-way matching results into Traverse
  - Import and model refund matching into Traverse
- Customer Service
  - Deploy new wrap-up codes
  - Allow proper CS replacements
  - Add features to Customers Out-of-stock options
- Architecture
  - Complete Layer separation refactoring (Data, Business, Application, Presentation)
  - Complete unit testing of Data Layer
  - Flesh out and train on unit testing other layers
  - Cache expiration services and interface (local cache)
  - Refactor ProductOptionExt relationship
  - Pick out past Fogbugz ideas to do (over 100)
